**Subject:** Availability of Molybdenum-99, and Tc-99 generators

31<sup>st</sup> October 2024

**Dear Valued Customer,**

**Update: availability of Molybdenum-99 over the next two weeks, impacting the supply of Tc-99 generators.**

As you might be aware, and as reported by NMEU (Nuclear Medicine Europe), the restart of the HFR reactor has been delayed. Unfortunately, this, along with maintenance on other global reactors has impacted the general availability of molybdenum-99 and, therefore, of Tc-99 generators in the markets we serve.

We understand the significance of this supply chain and our teams are collaborating with several parties to ensure maximum supply to the market, and to keep you informed.

Although good progress to restart the HFR reactor has been reported to us, we will regrettably experience a shortage of molybdenum-99 in the coming two weeks.

Consequently, this means we will not be able to supply any UTK generators on Wednesday 6<sup>th</sup> and Friday 8<sup>th</sup> November 2024.

Looking ahead to the week commencing 11<sup>th</sup> November 2024, we are unable to supply the Sodium pertechnetate (99mTc) CIS Bio International 2-50 GBq radionuclide generator (previously known as 'Tekcis') delivered Wednesday 13<sup>th</sup> November. We expect our usual level of activity for the remainder of the week, however, to resume as expected for UTK Generators.

We understand that these changes may impact your operations, and we sincerely apologize for any inconvenience this may cause. Our team is actively working to mitigate these delays resulting from aspects outside of GE HealthCare's control and to ensure that we can meet your needs moving forward. Should this situation change, we will be sure to keep you updated.

Please do not hesitate to contact our customer services team or your local account manager, should you have any questions or require further clarification.

Thank you for your understanding and continued support.

Jill Cooper  
General Manager, Commercial Operations
